PROJECTS

All the projects listed below were created during my free time, where I focused on building my skills, learning new technologies, and applying them in real-world scenarios.

- Car Shop: A full-stack web application designed for a car dealership platform. It includes various functionalities such as user authentication, car listings, and interactive features to enhance the user experience. The project demonstrates my skills in front-end and back-end development.
 - agashi01.github.io/car-shop-frontend
 - github.com/agashi01/car-shop
- Smart Brain: A project for detecting faces in a given image, handling user accounts, and more. This application uses artificial intelligence techniques to identify faces in images and provides functionality for user registration, login, and account management.
 - agashi01.github.io/face-detection
 - github.com/agashi01/face-detection
 - github.com/agashi01/face-recognition-backend
